William Kerr papers, University Archive, 03p01s04d02Bx002Fd11 (Summer School, 1902, 1904, 1906)

This Summer School, 1902, 1904, 1906 is brought to you for free and open access by the William J. Kerr at DigitalCommons@USU. It has been accepted for inclusion in Reports of the Secretary to the President Student Affairs President's Correspondence, 1900-1907 by an authorized administrator of DigitalCommons@USU. For more information, please contact [digitalcommons@usu.edu](mailto:digitalcommons@usu.edu).

The Agricultural College Summer School opens June 20th, and continues five weeks. Students are free to elect such courses as they may desire. Agriculture, Domestic Science, Domestic Arts, and Mechanic Arts, the characteristic courses of the Agricultural College, are to be emphasized. The work of these four courses is presented by experts of long experience and high standing. No other school in the state has such extensive and costly equipment for technical work along these lines as the Agricultural College of Utah. There are teachers engaged during the winter who would have no opportunity to do work in agriculture, domestic science, domestic arts, and mechanic arts, were it not for the College Summer School. State institutions should diffuse their benefits as widely as possible; they should try to benefit all classes. It is to meet a demand for summer work along the distinctive lines of the College, that the Summer School is maintained.

Strong and helpful courses are offered in English, mathematics, science, nature study, history and pedagogy. The work in English is arranged so as to enable the College students to continue ~~their~~ work already begun, and especially is it intended to facilitate review work on the part of teachers. Courses offered in mathematics are both extensive and thorough. Helpful reviews are to be an essential feature of this work. Chemistry, nature study, and botany are taught by the laboratory method in such a manner that the very presentation of the material carries along with ~~it~~ the pedagogy of the subject. Breadth of

view and method are emphasized in the history work. There is a pedagogy which is an outgrowth of the characteristic work of the Agricultural College. It is to receive special exposition along with a discussion of general educational principles. Stress is to be placed upon tested principles rather than upon theoretical vagaries.

The Agricultural College Summer School is to be conducted by members of the regular College faculty. The heads of departments offering courses, with one exception, are to do work in the Summer School. It is the intention to build up a Summer School on the merits of the Agricultural College.

Any course offered in the College catalogue is given if a reasonable number of students ask for it. Such credit will be entered on the College register as the work done may warrant. By special arrangement with heads of departments, work done in the Summer School may be continued by correspondence.

~~The common school branches will be reviewed. Pedagogy will receive special attention.~~

~~Boarding~~ and <sup>rooms</sup> lodging may be had in the College Dormitory at reasonable rates. The Dormitory is near the College and commands one of the finest views in the state.

The Agricultural College is delightfully situated for summer school work. During the summer season Logan is sought by tourists in search of pleasure and health. All persons who desire to combine profitable study with pleasure can well afford to attend the Summer School

Students of the Summer School have free use of the equipment of the College throughout all its departments,--the library, scientific and kitchen laboratories, sewing rooms, shops, barns, conservatory, etc.

No pains are to be spared in making the Summer School beneficial to

students. Thoroughness is insisted upon, and high standards of work are maintained throughout all courses.
